Sublitec 3D Sublimation Ovens

Jupiter

This oven is the perfect device for a medium to large shop requiring 3D sublimation. The system is designed for working with one to three trays simultaneously with one or two sided production. The trays can be formatted up to 18" x 25" and the standard height can accommodate trays up to 5" tall. The system is easy to set up, and works on a wide range of objects and materials. Very strong convected air with a large bi-directional air flow and circulated heating cause an even and consistent flow of hot air to reproduce results time after time with vibrant color and even formation over the parts. This counter mounted oven is 37" wide by 36" deep and 33" tall. Several rack positions are available or it can be configured for your specific purpose. A mounting stand is available with storage for an extra set of trays and production accessories. This creates a workflow where one set is heated. When sublimation is finished the trays are placed in the stand to cool and fresh trays are inserted in the oven for heating. The stored trays are then removed from the stand, emptied and prepared for the next cycle. Maximum production is attained and a consistent flow of production is essential for consistent color and profitability. The Jupiter oven works on 220V single phase current at 50Amps and weighs 250 pounds without fixtures. The Jupiter can also operate on 220v 3 PH or 440v by an adjustment in the wiring.

Jupiter Oven

Mars

This oven is the perfect device for a medium size shop requiring 3D sublimation. The system is designed for working with a single tray with one or two sided production. The trays can be formatted up to 13" x 18" and the standard height can accommodate trays 5" tall or more. The system is easy to set up, and works on a wide range of objects and materials. Very strong convected air with bi-directional air flow and circulated heating cause an even and consistent flow of hot air to reproduce results time after time with vibrant color and even formation over the parts. This counter mounted oven is 22" wide by 24" deep and 21" tall. The Mars oven works on 220v single phase current at 15 Amps and weighs 100 pounds without fixtures.

Mars Oven

Apollo

Coming soon is the Apollo table top oven. This oven is the perfect device for the small shop requiring 3D sublimation. The system is designed for working with a single tray with single sided work. It is economical, but powerful enough to do the most demanding work.
